Madden Creek Water System Reconstruction Continues This Summer

Phase Three of Project Will Focus on Water Mains Under Highway 89

WHAT: Contractors for TCPUD are planning in April to begin work on Phase Three of the Madden Creek Water System Reconstruction Project to:

- Build 5,356 feet of 8-inch water main and 394 feet of 12-inch water main.
- Install 10 fire hydrants.
- Install 56 new water meter pits for future meters.

This phase will completely rebuild the system within the Highway 89 right of way from Fern Street to South Street, and replace portions on Sacramento Avenue and Sans Souci Terrace south of Fawn Street.

WHY: The 80-year old water system has exceeded its useful life and is actively failing. Reconstruction will upsize water mains for improved flow and fire suppression capacity.

WHEN: Construction is scheduled to begin with tree removal on April 20th and last through Fall 2025.

WHAT TO EXPECT: A number of trees along the highway will be removed at the start of the project due to conflict with the new water main location.

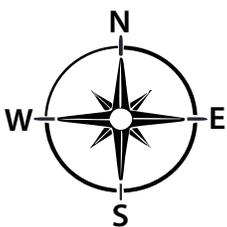

Expect construction noise and temporary traffic controls. Work will move through the area in small sections, with impacts lasting about 2–3 days per location.

Access to properties will be maintained, though brief restrictions may occur. Crews will work to minimize disruptions.

2.4 Miles of West Shore Trail to be Reconstructed in 2025

TCPUD is investing \$4.8 million to reconstruct 2.4 miles of trail between Sunnyside and Blackwood Creek.

Originally built in the 1970s, the West Shore Trail has benefited from TCPUD’s regular maintenance, but after nearly 50 years, a full reconstruction is necessary.

The project will improve:

- Pavement integrity and safety
- Slope and alignment for a smoother ride
- Visibility for pedestrians and vehicles
- ADA compliance
- Drainage and erosion control

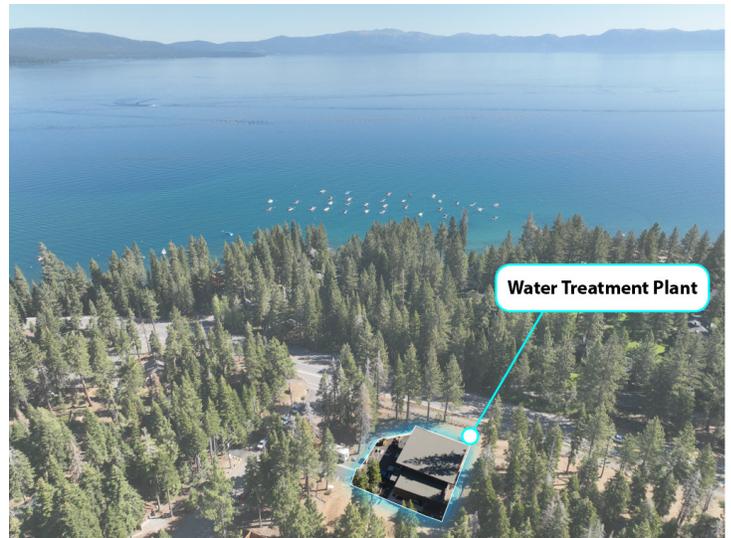

Trail Impacts

During peak construction, the trail may experience full closures. However, on weekends and from June 28 to July 13, the trail will either remain open or have detour options available.

Thank you to the Placer County & NTCA TOT-TBID program and the Tahoe Fund for project funding support.

Progress on West Lake Tahoe Water Treatment Plant Continues

Work continues to bring the new West Lake Tahoe Regional Water Treatment Plant online, with full operation expected in Summer 2025.

The new water treatment plant replaces a temporary facility in Chambers Landing. The new plant will provide a permanent, drought-resistant drinking water source from Lake Tahoe and support improved fire suppression capacity.
